SOS call™

"Emergency button"--The special feature in Bittel bathroom phone, you can store the emergency number in advance, when something emergency happens, the guest can press the button for SOS call.

Your Hotel, Our Bittel

Bittel has led the way in creating the new features & functions to the hotel phones. Besides of the four basic hotel phone features (Faceplate, Speed-dial button, Message Waiting Light and Data Port), Bittel has successfully innovated 17 more patented features, which are becoming the new standards in this industry. These features and functions reflecting the humanism in the hospitality industry, which is the hotels are seeking for.
Bittel always follows four principles as Convenient First, Safety First, Privacy First and Comfort First.

Unique technique

Faceplate Plus™

The large faceplate isn't large enough for more information. This second plate makes up for this. It posts the kind reminder to guests, as well as saves the space of the table in room.

Magnetic Hook Switch™

Magnetic technology is used for hook switch, which is the best solution for waterproof. The Magnetic Hookswitch design also makes the telephone look more artistic and much easier to clean.

SmartTray™

The tray has changed the traditional way of putting the coiled cord. It makes the phone set tidy and prolong the use life of cord.

Double-Dial Pads™

The Double-Dialed Pads guestroom phone can dial either through base unit or through handset. Both base unit and handset has keypads, handset keypad is membrane and backlight. It is the marking feature of the third generation hotel phone. Guest may make/answer call by the handset lying in bed like using cordless phone, unnecessary to put the handset back.

Magic-Faceplate™

The unique membrane keypad is soft touch, back-lit, waterproof and easy to clean. The life of membrane keypad is much longer than the regular keypad.

AutoConnect™

Busy tone disconnected automatically based on detecting 9 times. The guest won't worry to lose any call, even sometime the handset is not put back well.

Express Programmer™

The traditional programming way by hand is boring and cost much, by Bittel patent Cloner device, the room telephones can tbe programmed by the Express Programmer Cloner. With 100% accuracy and saving much work, the Programmer Cloner increases efficiency greatly.

Guest Service Keys™

Traditionally，people usually adopt the large capacitor to store the one-touch programmed number,but it's easy to lose the stored numbers after some time use.Bittel new hotel guestroom phone adopts E^2PROM combining software memory programmed technology, the stored numbers are stored in the chipset,with the powerful reliability.

PrivacyGuard™

The last dialed number disappeared after 5 minutes, it's a good way to protect the privacy for guests.

EZ Message Light™

"MWL with message retrieval function": Traditional voice mail service is very troublesome. Guest doesn't know how to use when MWL flashes. While our new MWL adopts patented technology of "light and key in one", guest touches and retrieves message when the red MWL flashes, very convenient, simple and quick.

Innovation leading new standards in Hotel industry

Global Pioneer of Unique Functions, Bittel's Special Contributions to Hospitality !
